VDOT Hi-Polymer Asphalt – Industry Perspective
PM-9I-15 – Project Overview
Initial Plan of Attack

- Mark joints prior to start
- Mill joints concurrently with 2” full mill
- Square up edges with small mill
- Clean debris and tack heavily
- Patch back by hand
- Compact with roller
Initial Plan of Attack

- Mark joints prior to start
- **Mill joints concurrently with 2” full mill**
- Square up edges with small mill
- Clean debris and tack heavily
- Patch back by hand
- Compact with roller
Initial Plan of Attack

AC Liquid Storage/Use

PG 64E-28
- More viscous
- Shelf-Life
- Increased coordination
I-95 SB @ Mine Rd

SM-12.5E (HP)
- Placement and compaction
- Workable
- Sets up quickly as it cools
I-95 SB @ Occoquan River

SM-9.0E (HP)
- More Workable than SM-12.5E (HP)
- Great for Joint Repair Patching
- Pace of Patching/Milling versus Paving
I-95 SB @ Occoquan River

SMA-9.5E (HP)
- Hard on equipment
- Very difficult to work by hand
- Shoulders/Ramps are a struggle
Lessons Learned

• Warm Mix Additives
• Temperature
