Crystalline Silica Standard

Virginia Department of Transportation
OSHA Crystalline Silica Standard

- 29 CFR 1926.1153
- Construction Standards
- Rule adopted by Virginia in December 2016
- Lowered the Permissible Exposure Limit from 250 ug/m3 to 50 ug/m3
- Full Compliance by June 23, 2017
- The rule will impact work practices associated with VDOT various divisions
What is Crystalline Silica?

• Is naturally occurring mineral compound that is found in many materials on construction sites
• Is basic component of sand, clay, granite and stone raw materials
• Is used to manufacture variety of products, including concrete, brick, tile, porcelain, pottery, glass, and abrasives
• Main impact for VDOT is its presence in concrete and asphalt
Main Requirements

- Engineering Controls/Work Practices to limit exposures - Typically Water, HEPA, Isolation (Cab)
- Written Exposure Control Plan for activities that generated crystalline silica dust
- Designation of a Competent Person - Superintendent, supervisor, crew leader, etc.
- Training
- Respiratory Protection / Medically monitoring for staff conducting activities where exposures exceed PEL
Silica Standard
VDOT Divisions & Sections

• Bridge Maintenance
• Road Maintenance
• Materials Division
• Tunnel Maintenance
• Regional Operations
• Facilities
• Construction Inspectors - Awareness
Applicability of the Silica Standard within VDOT Operations

VDOT staff conducts many activities that may generate silica dust. Mainly associated with asphalt and concrete:

- Abrasive blasting of concrete beams
- Saw Cutting
- Jack hammering
- Drilling & Chipping
- Coring
- Milling & Grinding
- Chip sealing- Roller
- Hydraulic breaker (Hoe Ram)
- Grading and excavation of silica containing materials
Exposure to respirable crystalline silica can cause:

- Silicosis
- Lung Cancer
- Tuberculosis
- Chronic obstructive pulmonary disorder (COPD)
- Kidney Disease
Construction Table 1
Specified Exposure Control Methods

https://www.osha.gov/silica/SilicaConstructionRegText.pdf

- Table 1 in the Standard lists many of the activities VDOT staff conducts, along with the engineering controls (water application or HEPA vac), work practices and where needed respiratory protection required to prevent exposure
- Alternative Exposure Control Methods
  - Conduct exposure assessments for employees associated with tasks **not** listed in **Table 1**
