Aquaphalt Installation Steps

Pour

Water

Tamp
Why Use Aquaphalt?

• Permanent, backed by a 3-year warranty
• Environmentally friendly, no VOC’s in it at all
• Sets up with water
• Can be installed in below freezing temperatures
• Open to traffic immediately and will be cured by the next day
• No need for large crews or special tools
More Productivity with Less Labor and Equipment

- Cal Trans in Anaheim, CA utilized Aquaphalt for this 30 bucket patch
- Cal Trans can do 6 patches a day with Aquaphalt where they can do 2 patches a day with hot asphalt
- Aquaphalt requires 2 guys and 1 truck. Hot asphalt requires more labor and more equipment.
VDOT Case Study of Aquaphalt with Four Year Follow Up Picture

Failing Asphalt and Concrete

Remove Failing Material

Place and Water Aquaphalt (23° out)

Compaction

Final Product

4 Year Follow Up Picture
Monitor-Merrimac Bridge Tunnel Installation

27’ below sea level with water seeping in.

Aquaphalt was placed, watered, and compacted.

Final compaction with a roller.

Open to traffic immediately after compaction.

“We repaired over 30 joints at the approaches of the MMBT in this manner. Regular hot mix would not have done the job in these wet and dirty conditions. These patches have been in place for over two years and have made me a believer.”

-Mark Range of Virginia Paving Company, a division of Lane Construction
NASCAR Race at New Hampshire Motor Speedway in September 2017
